

It's COL. W.D. JACKHORN'S
EXTRAORDINARY
 TRAVELLING
MEDICINE SHOW!

SPACE REQUIREMENTS:

stage / performing area :
 13' wide X 9' deep,
 with 9' ceiling clearance

The show's set consists of :

- a wooden box cart/ puppet theatre on wheels taking up space of 3' wide by 6' long by 8' high
- several sandwich boards, about 2' wide by 4' high
- a container to hold puppets
- an optional free standing arc with hanging pennants.

TECHNICAL REQUIREMENTS:

- For smaller venues we supply the sound system: The *Fender Passport* (250 Watts), good for audience size of up to about 450 people.
- For larger venues it may be necessary to patch into your existing system. That requires two direct inputs for a wireless mike and a tape player built into the cart, both with a ¼ inch male jacks coming out.
- This show does not require any special lighting, but of course needs to be lit. Overhead lights are fine. Theatre shows and night-time outdoor shows will require your lights
